

Exhibit 12

UNITED STATES DISTRICT COURT
NORTHERN DISTRICT OF FLORIDA
PANAMA CITY DIVISION

IN THE MATTER OF THE SEARCH OF
4068 FAIRBANKS DRIVE, CHIPLEY,
FLORIDA 32428

Case No. 5:20-mj-44-MJF

Filed Under Seal

AFFIDAVIT IN SUPPORT OF
AN APPLICATION FOR A SEARCH WARRANT

I, Lawrence P. Borghini, a Special Agent with the Federal Bureau of Investigation ("FBI") being duly sworn, depose and state as follows:

INTRODUCTION

1. I have been employed as a Special Agent ("SA") of FBI, since April 14, 1996, and am currently assigned to the Jacksonville Division, Panama City Resident Agency. While employed by the FBI, I have investigated federal criminal violations related to high technology or cybercrime, child exploitation, and child pornography. I have gained experience through training provided by the FBI and everyday work relating to conducting these types of investigations. I have received specialized training in the area of child pornography and child exploitation, and have had the opportunity to observe and review numerous examples of child pornography (as defined in 18 U.S.C. § 2256) in all forms of media including computer media. Consequently, I am familiar with the ways in which these individuals/organizations

3. This Affidavit is submitted in support of an application under Rule 41 of the Federal Rules of Criminal Procedure for a search warrant for the locations specifically described in **Attachment A** of this Affidavit, including the entire property located at 4068 Fairbanks Drive, Chipley, Florida, (the “SUBJECT PREMISES”), the content of electronic storage devices located therein, and any person located at the SUBJECT PREMISES, for contraband and evidence, fruits,

3

STATUTORY AUTHORITY

5. As noted above, this investigation concerns alleged violations of the following:

a. 18 U.S.C. § 2252(a)(2) and (b)(1) prohibit any person from knowingly receiving or distributing, or attempting or conspiring to receive or distribute, any visual depiction using any means or facility of interstate or foreign commerce, or that has been mailed or shipped or transported in or affecting interstate or foreign commerce, or which contains materials which have been mailed or so shipped or transported, by any means including by computer, or knowingly reproducing any visual depiction for distribution using any means or facility of interstate or foreign commerce, or in or affecting interstate or foreign commerce or through the mails, if the production of such visual depiction involved the use of a minor engaging in sexually explicit conduct and such visual depiction is of such conduct.

b. 18 U.S.C. § 2252A(a)(5)(B) and (b)(2) prohibit a person from knowingly possessing or knowingly accessing with intent to view, or attempting or conspiring to do so, any material that contains an image of child pornography, as defined in 18 U.S.C. § 2256(8), that has been mailed, or shipped or transported using any means or facility of interstate or foreign

commerce, or in or affecting interstate or foreign commerce, by any means, including by computer, or that was produced using materials that have been mailed or shipped or transported in or affecting interstate or foreign commerce by any means, including by computer.

DEFINITIONS

6. The following definitions apply to this Affidavit and Attachment B:

a. “Bulletin Board” means an Internet-based website that is either secured (accessible with a password) or unsecured, and provides members with the ability to view postings by other members and make postings themselves. Postings can contain text messages, still images, video images, or web addresses that direct other members to specific content the poster wishes. Bulletin boards are also referred to as “internet forums” or “message boards.” A “post” or “posting” is a single message posted by a user. Users of a bulletin board may post messages in reply to a post. A message “thread,” often labeled a “topic,” refers to a linked series of posts and reply messages. Message threads or topics often contain a title, which is generally selected by the user who posted the first message of the thread. Bulletin boards often also provide the ability for members to communicate on a one-to-one basis through “private messages.” Private messages are similar to e-mail messages that are sent

between two members of a bulletin board. They are accessible only by the users who sent/received such a message, or by the bulletin board administrator.

b. “Chat,” as used herein, refers to any kind of text communication over the Internet that is transmitted in real-time from sender to receiver. Chat messages are generally short in order to enable other participants to respond quickly and in a format that resembles an oral conversation. This feature distinguishes chatting from other text-based online communications such as Internet forums and email.

c. “Chat room,” as used herein, refers to the ability of individuals to meet in one location on the Internet in order to communicate electronically in real-time to other individuals. Individuals may also have the ability to transmit electronic files to other individuals within the chat room.

d. “Child erotica,” as used herein, means materials or items that are sexually arousing to persons having a sexual interest in minors but that are not necessarily obscene or do not necessarily depict minors engaging in sexually explicit conduct.

e. “Child pornography,” as defined in 18 U.S.C. § 2256(8), is any visual depiction, including any photograph, film, video, picture, or computer or computer-generated image or picture, whether made or produced by electronic, mechanical or other means, of sexually explicit conduct, where (a) the production of the visual

depiction involved the use of a minor engaged in sexually explicit conduct, (b) the visual depiction is a digital image, computer image, or computer-generated image that is, or is indistinguishable from, that of a minor engaged in sexually explicit conduct, or (c) the visual depiction has been created, adapted, or modified to appear that an identifiable minor is engaged in sexually explicit conduct.

f. “Cloud storage,” as used herein, is a form of digital data storage in which the digital data is stored on remote servers hosted by a third party (as opposed to, for example, on a user’s computer or other local storage device) and is made available to users over a network, typically the Internet.

g. “Computer,” as used herein, refers to “an electronic, magnetic, optical, electrochemical, or other high speed data processing device performing logical or storage functions, and includes any data storage facility or communications facility directly related to or operating in conjunction with such device” and includes smartphones, other mobile phones, and other mobile devices. *See* 18 U.S.C. § 1030(e)(1).

h. “Computer hardware,” as used herein, consists of all equipment that can receive, capture, collect, analyze, create, display, convert, store, conceal, or transmit electronic, magnetic, or similar computer impulses or data. Computer hardware includes any data-processing devices (including central processing units,

internal and peripheral storage devices such as fixed disks, external hard drives, “thumb,” “jump,” or “flash” drives, which are small devices that are plugged into a port on the computer, and other memory storage devices); peripheral input/output devices (including keyboards, printers, video display monitors, and related communications devices such as cables and connections); as well as any devices, mechanisms, or parts that can be used to restrict access to computer hardware (including physical keys and locks).

i. “Computer passwords and data security devices,” as used herein, consist of information or items designed to restrict access to or hide computer software, documentation, or data. Data security devices may consist of hardware, software, or other programming code. A password (a string of alpha-numeric characters) usually operates what might be termed a digital key to “unlock” particular data security devices. Data security hardware may include encryption devices, chips, and circuit boards. Data security software may include programming code that creates “test” keys or “hot” keys, which perform certain pre-set security functions when touched. Data security software or code may also encrypt, compress, hide, or “booby-trap” protected data to make it inaccessible or unusable, as well as reverse the process to restore it.

1. A “hidden service,” also known as an “onion service,” is website or other web service that is accessible only to users operating within the Tor anonymity network.

n. The “Internet” is a global network of computers and other electronic devices that communicate with each other. Due to the structure of the Internet, connections between devices on the Internet often cross state and international borders, even when the devices communicating with each other are in the same state.

9

the Internet, web hosting, email, remote storage, and co-location of computers and other communications equipment.

p. An “Internet Protocol address” or “IP address,” as used herein, refers to a unique numeric or alphanumeric string used by a computer or other digital device to access the Internet. Every computer or device accessing the Internet must be assigned an IP address so that Internet traffic sent from and directed to that computer or device may be directed properly from its source to its destination. Most Internet Service Providers (“ISPs”) control a range of IP addresses. IP addresses can be “dynamic,” meaning that the ISP assigns a different unique number to a computer or device every time it accesses the Internet. IP addresses might also be “static,” if an ISP assigns a user’s computer a particular IP address that is used each time the computer accesses the Internet. ISPs typically maintain logs of the subscribers to whom IP addresses are assigned on particular dates and times.

q. “Minor,” as defined in 18 U.S.C. § 2256(1), refers to any person under the age of eighteen years.

r. “Records,” “documents,” and “materials,” as used herein, include all information recorded in any form, visual or aural, and by any means, whether in handmade, photographic, mechanical, electrical, electronic, or magnetic form.

s. “Remote computing service,” as defined in 18 U.S.C. § 2711(2), is the provision to the public of computer storage or processing services by means of an electronic communications system.

t. “Sexually explicit conduct,” as defined in 18 U.S.C. § 2256(2), means actual or simulated (a) sexual intercourse, including genital-genital, oral-genital, anal-genital, or oral-anal, whether between persons of the same or opposite sex; (b) bestiality; (c) masturbation; (d) sadistic or masochistic abuse; or (e) lascivious exhibition of the anus, genitals, or pubic area of any person.

u. A “storage medium” is any physical object upon which computer data can be recorded. Examples include hard disks, RAM, floppy disks, “thumb,” “jump,” or “flash” drives, CD-ROMs, and other magnetic or optical media.

v. The “Tor network” is a computer network available to Internet users that is designed specifically to facilitate anonymous communication over the Internet. The Tor network attempts to do this by routing Tor user communications through a globally distributed network of relay computers, along a randomly assigned path known as a “circuit.”

w. “URL” is an abbreviation for Uniform Resource Locator and is another name for a web address. URLs are made of letters, numbers, and other symbols in a standard form. People use them on computers by clicking a pre-prepared link or

typing or copying and pasting one into a web browser to make the computer fetch and show some specific resource (usually a web page) from another computer (web server) on the Internet.

x. “Visual depiction,” as defined in 18 U.S.C. § 2256(5), includes undeveloped film and videotape, data stored on computer disc or other electronic means which is capable of conversion into a visual image, and data which is capable of conversion into a visual image that has been transmitted by any means, whether or not stored in a permanent format.

y. A “Website” consists of textual pages of information and associated graphic images. The textual information is stored in a specific format known as Hyper-Text Mark-up Language (HTML) and is transmitted from web servers to various web clients via Hyper-Text Transport Protocol (HTTP).

BACKGROUND OF THE INVESTIGATION AND PROBABLE CAUSE

7. A user of the Internet account at the SUBJECT PREMISES has been linked to an online community of individuals who regularly send and receive child pornography via a hidden service website that operated on the Tor anonymity network. The website is described below and referred to herein as the “TARGET

WEBSITE.”¹ There is probable cause to believe that a user of the Internet account at the SUBJECT PREMISES accessed the TARGET WEBSITE, as further described herein.

The Tor Network

8. The Internet is a global network of computers and other devices. Devices directly connected to the Internet are uniquely identified by IP addresses, which are used to route information between Internet-connected devices. Generally, when one device requests information from a second device, the requesting device specifies its own IP address so that the responding device knows where to send its response. On the Internet, data transferred between devices is split into discrete packets, each of which has two parts: a header with non-content routing and control information, such as the packet’s source and destination IP addresses; and a payload, which generally contains user data or the content of a communication.

9. The website further described below operated on the Tor network, which is a computer network available to Internet users that is designed specifically to facilitate anonymous communication over the Internet. The Tor network attempts

¹ The name of the TARGET WEBSITE is known to law enforcement. Investigation into the users of the website remains ongoing and disclosure of the name of the website would potentially alert active website users to the investigation, potentially provoking users to notify other users of law enforcement action, flee, and/or destroy evidence.

to do this by routing Tor user communications through a globally distributed network of relay computers, along a randomly assigned path known as a “circuit.” Because of the way the Tor network routes communications through the relay computers, traditional IP address-based identification techniques are not effective.

10. To access the Tor network, a user must install Tor software. That is most easily done by downloading the free “Tor browser” from the Tor Project, the private entity that maintains the Tor network, via their website at www.torproject.org.² The Tor browser is a web browser that is configured to route a user’s Internet traffic through the Tor network.

11. As with other Internet communications, a Tor user’s communications are split into packets containing header information and a payload, and are routed using IP addresses. In order for a Tor user’s communications to be routed through the Tor network, a Tor user necessarily (and voluntarily) shares the user’s IP address with Tor network relay computers, which are called “nodes.” This routing information is stored in the header portion of the packet. As the packets travel through the Tor network, each node is able to see the address information of the previous node the communication came from and the next node the information

² Tor users may also choose to manually configure a web browser or other application to route communications through the Tor network.

should be sent to. Those Tor nodes are operated by volunteers – individuals or entities who have donated computers or computing power to the Tor network in order for it to operate.

12. Tor may be used to access open-Internet websites like www.justice.gov. Because a Tor user's communications are routed through multiple nodes before reaching their destination, when a Tor user accesses such an Internet website, only the IP address of the last relay computer (the "exit node"), as opposed to the Tor user's actual IP address, appears on that website's IP address log. In addition, the content of a Tor user's communications are encrypted while the communication passes through the Tor network. That can prevent the operator of a Tor node from observing the content (but not the routing information) of other Tor users' communications.

13. The Tor Project maintains a publicly available frequently asked questions (FAQ) page, accessible from its website, with information about the Tor network. Within those FAQ, the Tor Project advises Tor users that the first Tor relay to which a user connects can see the Tor user's actual IP address. In addition, the FAQ also cautions Tor users that the use of the Tor network does not render a user's communications totally anonymous. For example, in the Tor Project's FAQ, the

question “So I’m totally anonymous if I use Tor?” is asked, to which the response is, in bold text, “No.”

14. The Tor Network also makes it possible for users to operate or access websites that are accessible only to users operating within the Tor network. Such websites are called “hidden services” or “onion services.” They operate in a manner that attempts to conceal the true IP address of the computer hosting the website. Like other websites, hidden services are hosted on computer servers that communicate through IP addresses. However, hidden services have unique technical features that attempt to conceal the computer server’s location.

15. Unlike standard Internet websites, a Tor-based web address is comprised of a series of either 16 or 56 algorithm-generated characters, for example “asdlk8fs9dfiku7f,” followed by the suffix “.onion.” Ordinarily, investigators can determine the IP address of the computer server hosting a website (such as www.justice.gov) by simply looking it up on a publicly available Domain Name System (“DNS”) listing. Unlike ordinary Internet websites, however, there is no publicly available DNS listing through which one can query the IP address of a computer server that hosts a Tor hidden service. So, while law enforcement agents can often view and access hidden services that are facilitating illegal activity, they cannot determine the IP address of a Tor hidden service computer server via public

lookups. Additionally, as with all Tor communications, communications between users' computers and a Tor hidden service webserver are routed through a series of intermediary computers. Accordingly, neither law enforcement nor hidden-service users can use public lookups or ordinary investigative means to determine the true IP address – and therefore the location – of a computer server that hosts a hidden service.

Description of TARGET WEBSITE

16. The TARGET WEBSITE was an online bulletin board dedicated to the advertisement and distribution of child pornography that operated from approximately at least September 2016 to June 2019. In June of 2019, the computer server hosting the TARGET WEBSITE, which was located outside of the United States, was seized by a foreign law enforcement agency.

17. A review of the initial TARGET WEBSITE page revealed it was a message board web page that contained a search bar, and showcased two hyperlinks titled, "Announcements" and "Important Information." Located below the title were hyperlinks including those entitled "Quick Links," "Home," "Board Index," "Login," and "Register." As of June 2019, the website had over 820,000 members and over 81,000 postings.

18. Upon accessing the “Announcements” hyperlink of the TARGET WEBSITE, the following message was displayed in message board form, “Welcome, Please read before registering” which was dated July 1, 2016. Upon accessing the aforementioned hyperlink, the message read, “Welcome abusers and abusees and those that enjoy watching. This website was created to host videos, photos and discussions of 18 (twinks) and younger of Hurtcore materials (videos & pictures) as well as discussion of such.” Based on my training and experience, I know that Hurtcore refers to violent pornography. The message continued, “PS Please register to see all the forums, and use strong password for user profile.”

19. Upon accessing the “Register” link of the TARGET WEBSITE, it was revealed that users would complete a “Username,” “Password,” “Confirm password,” “Language,” and “My timezone,” fields, as well as a “Confirmation of Registration” code. Upon entering the TARGET WEBSITE, sections and forums for posting to the website included “HURTCORE Toddlers Videos (Ages 0-5),” “Preteen/Hebe Children Videos (Ages 6-13),” “Teens Videos (Ages 14+),” “Toddlers Images (Ages 0-5),” “Preteen/Hebe Children Images (Ages 6-13),” and “Teens Images (Ages 14+).” Based on my training and experience, I know that “Hebe” is a reference to a “hebephile,” which is a person with a persistent sexual interest in pubescent minor children. Another forum was named “GORE/DEATH”

which included sub-forms for “Toddlers (Ages 0-5),” “Preteen/Hebe Children (Ages 6-13)” and “Teens (Ages 14+).” An additional section of the website called “The Team” listed the usernames of two website “Administrators” and five “Global Moderators.” The TARGET WEBSITE also contained a private message feature that was available, allowing users to send private messages to each other.

20. On June 23, 2016, a website administrator posted a topic entitled “Board Rules” in the “Important Information” forum which contained the following explanation of the website:

Rules are simple all material must be related to Hurtcore content. What is Hurtcore content? It is rape, fighting, wrestling, bondage, spanking, pain, mutilation, gore, dead bodies, and etc. (no limits) Why does this place exist? There was a need and since society thinks I am worst than any abuser or creator of Hurtcore content, I decided to create this place for those who like it and want to share. Besides I am the mischievous god. It is up to you to make this the best Hurtcore board there is. So please upload whatever you can so that it can be shared.

21. A review of the “Toddlers Videos,” “Preteen/Hebe Children,” “Toddlers Images,” and “Gore/Death” forums and subforums, as well as additional forums, within the various above sections revealed they contained numerous pages of topics. Each topic contained a title, the author, the number of replies, the number of views, and the last post. The last post section included the date and time of the post as well as the author. Upon accessing a topic, the original post appeared at the

top of the page, with any corresponding replies to the original post included in the thread below it. Typical posts appeared to contain text, images, thumbnail previews of images, links to external sites with compressed files (such as “.rar”), or replies to previous posts.

22. A review of topics within these sections revealed numerous posts containing images and/or videos depicting child pornography and child erotica of prepubescent males, females, toddlers, and infants; including those depicting anal, vaginal, and oral penetration. Additionally, these sections revealed numerous posts containing images and/or videos depicting child pornography involving gore and sometimes death. Examples of these are as follows:

23. On October 9, 2016, a website user posted a topic entitled “Fuck the newborn. Real fuck!” in the “Hurtcore/Toddlers Images/Girls” forum, that contained nine images depicting child pornography and child erotica of a prepubescent female infant. One of these images depicted a naked female infant lying on her back with her legs spread apart, exposing her vagina, with a gloved adult finger inserted into her anus. A male’s penis was pressed against her vagina and the head of the penis inserted into her mouth. A brown liquid substance, appearing to be the infant’s feces are seen smeared around her anus.

24. On November 5, 2016, a website user posted a topic entitled “BabyHee 1yo (one of full version)” in the “HurtCore/Toddlers Videos/Boys” forum that contained images depicting child pornography and torture of a prepubescent male, who was completely naked and tied down with rope on the side of a bath tub. Among other things, the images depicted an adult male defecating on the chest and urinating in the mouth of the prepubescent male.

Evidence Related to Identification of Target

That Accessed TARGET WEBSITE

25. I am aware that U.S. as well as foreign law enforcement agencies investigate anonymous offenders engaging in online child sexual exploitation via Tor hidden service websites such as the website(s) described herein. Those websites are globally accessible. The websites and their users may therefore be located anywhere in the world. Due to the anonymity provided by the Tor network, it can be difficult or impossible to determine, at the beginning of an investigation, where in the world a particular website or user is located. Accordingly, when a law enforcement agency obtains evidence that such a website or website user may be located in another country, it is common practice for that law enforcement agency to share information with a law enforcement agency in the country where the website is located or the offender appears to reside, in accordance with each country’s laws.

26. In August 2019, a foreign law enforcement agency (referenced herein as “FLA”) known to the FBI and with a history of providing reliable, accurate information in the past, notified the FBI that FLA determined that on April 12, 2019 at 10:51:20 (UTC), IP address 104.191.59.32 “was used to access online child sexual abuse and exploitation material” via a website that the FLA named and described as the TARGET WEBSITE.

27. FLA described the website as having “an explicit focus on the facilitation of sharing child abuse material (images, links and videos), emphasis on BDSM, hurtcore, gore and death-related material including that of children,” stated that “[u]sers were required to create an account (username and password) in order to access the majority of the material,” and provided further documentation naming the website as the TARGET WEBSITE, which the FLA referred to by its actual name.

28. FLA is a national law enforcement agency of a country with an established rule of law. There is a long history of U.S. law enforcement sharing criminal investigative information with FLA and FLA sharing criminal investigative information with U.S. law enforcement, across disciplines and including the investigation of crimes against children. FLA advised U.S. law enforcement that it obtained that information through independent investigation that was lawfully

authorized in FLA's country pursuant to its national laws. FLA further advised U.S. law enforcement that FLA had not interfered with, accessed, searched or seized any data from any computer in the United States in order to obtain that IP address information. U.S. law enforcement personnel did not participate in the investigative work through which FLA identified the IP address information provided by FLA.

29. I am aware through my training and experience and consultation with other U.S. law enforcement agents that tips provided by FLA regarding IP addresses that FLA advised were associated with access to Tor network child exploitation-related web and chat sites have: (1) led to the identification and arrest of a U.S.-based child pornography producer and hands-on offender, and the identification and rescue of multiple U.S. children subject to that offender's ongoing abuse; (2) led to the seizure of evidence of child pornography trafficking and possession; and (3) been determined through further investigation to be related to targets that U.S. law enforcement investigation had independently determined were associated with child pornography trafficking and possession.

30. As described herein, the TARGET WEBSITE could not generally be accessed through the traditional internet. Only a user who had installed the appropriate Tor software on the user's computer could access the "TARGET WEBSITE." Even after connecting to the Tor network, however, a user would have

to find the 16-or-56-character web address of the TARGET WEBSITE in order to access it. Hidden service websites on the Tor Network are not “indexed” by search engines—such as Google—to anywhere near the same degree as websites that operate on the open Internet. Accordingly, it is much more difficult to perform a Google-type search of hidden service websites than it is to search open Internet websites for particular content of interest. Users interested in accessing child exploitation material (or in advertising child exploitation and pornography websites they operate) therefore keep, maintain and use directory sites that advertise the web addresses of hidden services that contain child exploitation related content. Those directory sites also operate via the Tor network. Users utilize those directory sites to identify new web forums, chat sites, image galleries and file hosts pertaining to the sexual exploitation of children. Such directory sites often identify whether particular sites are then operating, whether child pornography imagery may be found there, and even what types of child pornography are accessible (i.e., boys, girls, or “hurtcore”). They also contain clickable hyperlinks to access those sites. As with other hidden service websites, a user must find the 16-or-56 character web address for a directory website in order to access it. While it operated, the web address for the website described herein was listed on one or more of such directory sites advertising hidden services dedicated to the sexual exploitation of children.

31. Accordingly, based on my training and experience and the information articulated herein, because accessing the TARGET WEBSITE required numerous affirmative steps by the user – to include downloading Tor software, accessing the Tor network, finding the web address for TARGET WEBSITE, and then connecting to TARGET WEBSITE via Tor – it is extremely unlikely that any user could simply stumble upon TARGET WEBSITE without understanding its purpose and content.

32. Accordingly, I submit that there is probable cause to believe that, for all of the reasons described herein, any user who accessed the TARGET WEBSITE has, at a minimum, knowingly accessed the TARGET WEBSITE with intent to view child pornography, or attempted to do so.

Identification of SUBJECT PREMISES

33. According to publicly available information, IP address 104.191.59.32 which was used to access TARGET WEBSITE on April 12, 2019, was registered to AT&T.

34. On or about February 20, 2020, an administrative subpoena was issued to AT&T in regard to the pertinent IP address. Shortly thereafter, a review of the results obtained identified the following account holder and address, which is the address of the SUBJECT PREMISES: Cynthia Duffy, 4068 Fairbanks Drive, Chipley, Florida 32428.

35. An Accurant database search, that provides names, dates of birth, addresses, associates, telephone numbers, email addresses, and other information, was conducted for 4068 Fairbanks Drive, Chipley, Florida 32428. The search identified Cynthia Duffy and Christopher Coy Duffy as possible residents.

36. A check of the Washington County Property Appraiser's website shows that Cynthia Dianne Duffy is the owner of the parcel of land and two bedroom, two bath, 1,067 square foot residence located at 4068 Fairbanks Drive, Chipley, Florida 32428. Cynthia Dianne Duffy has owned the property since 2005. A homestead exemption is being claimed for the property.

37. A search of the Florida Driver License and Vehicle Information Database (DAVID) for the SUBJECT PREMISES address revealed that an individual named Christopher Coy Duffy with a date of birth of December 16, 1982, and Cynthia Dianne Duffy with a date of birth March 24, 1952, list the SUBJECT PREMISES address as their residence. Within the documents section of DAVID for Christopher Coy Duffy was a birth certificate showing Cynthia Dianne Duffy as his mother. Christopher Coy Duffy has a current vehicle registration for a 2005 green Jeep Wrangler bearing Florida license plate DUFFLLC listing the SUBJECT PREMISES address.

38. A search of the Florida Department of State Division of Corporations lists DUFF, LLC's principal and mailing addresses as 4068 Fairbanks Drive, Sunny Hills, Florida 32428 (the SUBJECT PREMISES)³ and Christopher C. Duffy as the owner. DUFF, LLC filed Articles of Organization with the State of Florida on September 16, 2013, and had shown the SUBJECT PREMISES address as its' principal address and mailing address each year. DUFF, LLC is currently shown as inactive as having been administratively dissolved for annual report on September 27, 2019.

39. Surveillance of the SUBJECT PREMISES on May 4, 2020, revealed a single story blue residence with a Keystone Residence travel trailer located in the back yard. Surveillance cameras were mounted on the exterior of travel trailer. A green Jeep Wrangler bearing Florida license plate "DUFFLLC" was parked in close proximity to the travel trailer. The travel trailer had various items scattered under and around it indicating that it had been in place for some time and was occupied.

40. During the surveillance, in an effort to gain additional information regarding any potential wireless networks at the SUBJECT PREMISES, the Wi-Fi connection settings of a law enforcement wireless device was queried from the street

³ Sunny Hills is a residential community located in Washington County, Florida. The mailing address for the Sunny Hills area is Chipley, Florida.

directly in front for the SUBJECT PREMISES. It was noted that there were three (3) wireless networks in the area and all of them were secured. Accordingly, to use any of them to access the Internet, a user would likely have to know the encryption key or password for that particular network. Based on the signal strength of the wireless networks, as well as my training and experience and information relayed to me by agents, I believe that the wireless router at the SUBJECT PREMISES is likely generating a secured wireless network. Furthermore, the names of the wireless networks observed were ATT976, IBR900-548 and IBR900-548-5g. Each of the wireless networks displayed a signal strength bar next to it with a closed lock indicating the that wireless network was secured. It should be noted that one of the wireless networks observed and the IP address 104.191.59.32 used to access TARGET WEBSITE on April 12, 2019, was registered to AT&T. As explained above, I know, from my training and experience and information relayed to me by agents, that wireless routers for both secured and unsecured wireless networks may yield significant evidence of, or serve as instrumentalities of, a crime.

41. A check of open source information from the Internet regarding Christopher Coy Duffy revealed he had been arrested by the Washington County Sheriff's Office after being accused of sexually abusing a six-year-old child in

Washington County. According to the reports, Christopher Coy Duffy had forced the victim to perform sexual acts on him and touched the child's genitals.

42. A check of the records for the Clerk of the Courts for Washington County, Florida, shows Christopher Coy Duffy named as a defendant in case number 672019CF00293A in which he was charged with violating § 794.011(2)(a), Florida Statute, Sexual Battery on a Person less than 12 Years of Age. Christopher Coy Duffy was arrested on June 21, 2019. Bond was posted the following day. According to documents filed in the matter, the alleged activity occurred between the dates of December 1, 2018, and January 31, 2019. According to the victim, the sexual assault occurred in a camper when the victim was staying with Christopher Coy Duffy. Christopher Coy Duffy's address in the state case is listed as 4068 Fairbanks Drive, Chipley, Florida 32428 (the SUBJECT PREMISES). The matter is currently pending with a next scheduled court date of June 15, 2020.

BACKGROUND ON CHILD PORNOGRAPHY, COMPUTERS, AND THE INTERNET

43. I have had both training and experience in the investigation of computer-related crimes. Based on my training, experience, and knowledge, I know the following:

a. Computers and digital technology are the primary way in which individuals interested in child pornography interact with each other. Computers basically serve four functions in connection with child pornography: production, communication, distribution, and storage.

b. Digital cameras and smartphones with cameras save photographs or videos as a digital file that can be directly transferred to a computer by connecting the camera or smartphone to the computer, using a cable or via wireless connections such as “WiFi” or “Bluetooth.” Photos and videos taken on a digital camera or smartphone may be stored on a removable memory card in the camera or smartphone. These memory cards are often large enough to store thousands of high-resolution photographs or videos.

c. A device known as a modem allows any computer to connect to another computer through the use of telephone, cable, or wireless connection. Mobile devices such as smartphones and tablet computers may also connect to other computers via wireless connections. Electronic contact can be made to literally millions of computers around the world. Child pornography can therefore be easily, inexpensively and anonymously (through electronic communications) produced, distributed, and received by anyone with access to a computer or smartphone.

d. The computer's ability to store images in digital form makes the computer itself an ideal repository for child pornography. Electronic storage media of various types - to include computer hard drives, external hard drives, CDs, DVDs, and "thumb," "jump," or "flash" drives, which are very small devices that are plugged into a port on the computer - can store thousands of images or videos at very high resolution. It is extremely easy for an individual to take a photo or a video with a digital camera or camera-bearing smartphone, upload that photo or video to a computer, and then copy it (or any other files on the computer) to any one of those media storage devices. Some media storage devices can easily be concealed and carried on an individual's person. Smartphones and/or mobile phones are also often carried on an individual's person.

e. The Internet affords individuals several different venues for obtaining, viewing, and trading child pornography in a relatively secure and anonymous fashion.

f. Individuals also use online resources to retrieve and store child pornography. Some online services allow a user to set up an account with a remote computing service that may provide email services and/or electronic storage of computer files in any variety of formats. A user can set up an online

storage account (sometimes referred to as “cloud” storage) from any computer or smartphone with access to the Internet. Even in cases where online storage is used, however, evidence of child pornography can be found on the user’s computer, smartphone, or external media in most cases.

g. A growing phenomenon related to smartphones and other mobile computing devices is the use of mobile applications, also referred to as “apps.” Apps consist of software downloaded onto mobile devices that enable users to perform a variety of tasks – such as engaging in online chat, sharing digital files, reading a book, or playing a game – on a mobile device. Individuals commonly use such apps to receive, store, distribute, and advertise child pornography, to interact directly with other like-minded offenders or with potential minor victims, and to access cloud-storage services where child pornography may be stored.

h. As is the case with most digital technology, communications by way of computer can be saved or stored on the computer used for these purposes. Storing this information can be intentional (*i.e.*, by saving an email as a file on the computer or saving the location of one’s favorite websites in, for example, “bookmarked” files) or unintentional. Digital information, such as the traces of the path of an electronic communication, may also be

automatically stored in many places (e.g., temporary files or ISP client software, among others). In addition to electronic communications, a computer user's Internet activities generally leave traces or "footprints" in the web cache and history files of the browser used. Such information is often maintained indefinitely until overwritten by other data.

**CHARACTERISTICS COMMON TO INDIVIDUALS WHO ACCESS WITH
INTENT TO VIEW CHILD PORNOGRAPHY**

44. Based on my previous investigative experience related to child exploitation investigations, and the training and experience of other law enforcement officers with whom I have had discussions, I know there are certain characteristics common to individuals who access online child sexual abuse and exploitation material via a website.

a. Such individuals may receive sexual gratification, stimulation, and satisfaction from contact with children, or from fantasies they may have viewing children engaged in sexual activity or in sexually suggestive poses, such as in person, in photographs, or other visual media, or from literature describing such activity.

b. Such individuals may collect sexually explicit or suggestive materials in a variety of media, including photographs, magazines, motion

pictures, videotapes, books, slides and/or drawings or other visual media. Individuals who have a sexual interest in children or images of children oftentimes use these materials for their own sexual arousal and gratification. Further, they may use these materials to lower the inhibitions of children they are attempting to seduce, to arouse the selected child partner, or to demonstrate the desired sexual acts.

c. Such individuals almost always possess and maintain child pornographic material in the privacy and security of their home or some other secure location. Individuals who have a sexual interest in children or images of children typically retain those materials and child erotica for many years.

d. Likewise, such individuals often maintain their child pornography images in a digital or electronic format in a safe, secure and private environment, such as a computer and surrounding area. These child pornography images are often maintained for several years and are kept close by, usually at the possessor's residence, inside the possessor's vehicle, or, at times, on their person, or in cloud-based online storage, to enable the individual to view the child pornography images, which are valued highly. Some of these individuals also have been found to download, view, and then delete child pornography on their computers or digital devices on a cyclical

evidence of this access will be found in his home, the SUBJECT PREMISES, as set forth in Attachment A, including on digital devices other than the portable device (for reasons including the frequency of “backing up” or “synching” mobile phones to computers or other digital devices).

45. Based on all of the information contained herein, I believe that an internet user residing at the SUBJECT PREMISES likely displays characteristics common to individuals who access online child sexual abuse and exploitation material via a website. In particular, the target of investigation obtained and used Tor network software, found the web address for TARGET WEBSITE, and accessed online child sexual abuse and exploitation material via the TARGET WEBSITE.

SPECIFICS OF SEARCH AND SEIZURE OF COMPUTER SYSTEMS

46. As described above and in Attachment B, this application seeks permission to search for records that might be found on the SUBJECT PREMISES, in whatever form they are found. One form in which the records are likely to be found is data stored on a computer’s hard drive or other storage media. Thus, the warrant applied for would authorize the seizure of electronic storage media or, potentially, the copying of electronically stored information, all under Rule 41(e)(2)(B).

47. I submit that if a computer or storage medium is found on the SUBJECT PREMISES, there is probable cause to believe those records referenced above will be stored on that computer or storage medium, for at least the following reasons:

a. Deleted files, or remnants of deleted files, may reside in free space or slack space—that is, in space on the storage medium that is not currently being used by an active file—for long periods of time before they are overwritten. In addition, a computer’s operating system may also keep a record of deleted data in a “swap” or “recovery” file.

b. Based on my knowledge, training, and experience, I know that computer files or remnants of such files can be recovered months or even years after they have been downloaded onto a storage medium, deleted, or viewed via the Internet. Electronic files downloaded to a storage medium can be stored for years at little or no cost. Even when files have been deleted, they can be recovered months or years later using forensic tools. This is so because when a person “deletes” a file on a computer, the data contained in the file does not actually disappear; rather, that data remains on the storage medium until it is overwritten by new data.

c. Wholly apart from user-generated files, computer storage media—in particular, computers’ internal hard drives—contain electronic

evidence of how a computer has been used, what it has been used for, and who has used it. To give a few examples, this forensic evidence can take the form of operating system configurations, artifacts from operating system or application operation, file system data structures, and virtual memory “swap” or paging files. Computer users typically do not erase or delete this evidence, because special software is typically required for that task. However, it is technically possible to delete this information.

d. Similarly, files that have been viewed via the Internet are sometimes automatically downloaded into a temporary Internet directory or “cache.”

48. As further described in Attachment B, this application seeks permission to locate not only computer files that might serve as direct evidence of the crimes described on the warrant, but also for forensic electronic evidence that establishes how computers were used, the purpose of their use, who used them, and when. There is probable cause to believe that this forensic electronic evidence will be on any storage medium in the SUBJECT PREMISES because:

- a. Data on the storage medium can provide evidence of a file that was once on the storage medium but has since been deleted or edited, or of a deleted portion of a file (such as a paragraph that has been deleted from a word

processing file). Virtual memory paging systems can leave traces of information on the storage medium that show what tasks and processes were recently active. Web browsers, email programs, and chat programs store configuration information on the storage medium that can reveal information such as online nicknames and passwords. Operating systems can record additional information, such as the attachment of peripherals, the attachment of USB flash storage devices or other external storage media, and the times the computer was in use. Computer file systems can record information about the dates files were created and the sequence in which they were created, although this information can later be falsified.

b. Information stored within a computer and other electronic storage media may provide crucial evidence of the “who, what, why, when, where, and how” of the criminal conduct under investigation, thus enabling the United States to establish and prove each element or alternatively, to exclude the innocent from further suspicion. In my training and experience, information stored within a computer or storage media (*e.g.*, registry information, communications, images and movies, transactional information, records of session times and durations, Internet history, and anti-virus, spyware, and malware detection programs) can indicate who has used or

controlled the computer or storage media. This “user attribution” evidence is analogous to the search for “indicia of occupancy” while executing a search warrant at a residence. The existence or absence of anti-virus, spyware, and malware detection programs may indicate whether the computer was remotely accessed, thus inculcating or exculpating the computer owner. Further, computer and storage media activity can indicate how and when the computer or storage media was accessed or used. For example, computers typically contain information that logs: computer user account session times and durations, computer activity associated with user accounts, electronic storage media that connected with the computer, and the IP addresses through which the computer accessed networks and the Internet. Such information allows investigators to understand the chronological context of computer or electronic storage media access, use, and events relating to the crime under investigation. Additionally, some information stored within a computer or electronic storage media may provide crucial evidence relating to the physical location of other evidence and the suspect. For example, images stored on a computer may both show a particular location and have geolocation information incorporated into its file data. Such file data typically also contains information indicating when the file or image was created. The

existence of such image files, along with external device connection logs, may also indicate the presence of additional electronic storage media (*e.g.*, a digital camera or cellular phone with an incorporated camera). The geographic and timeline information described herein may either inculcate or exculpate the computer user. Last, information stored within a computer may provide relevant insight into the computer user's state of mind as it relates to the offense under investigation. For example, information within the computer may indicate the owner's motive and intent to commit a crime (*e.g.*, Internet searches indicating criminal planning), or consciousness of guilt (*e.g.*, running a "wiping" program to destroy evidence on the computer or password protecting/encrypting such evidence in an effort to conceal it from law enforcement).

c. A person with appropriate familiarity with how a computer works can, after examining this forensic evidence in its proper context, draw conclusions about how computers were used, the purpose of their use, who used them, and when.

d. The process of identifying the exact files, blocks, registry entries, logs, or other forms of forensic evidence on a storage medium that are necessary to draw an accurate conclusion is a dynamic process. While it is

possible to specify in advance the records to be sought, computer evidence is not always data that can be merely reviewed by a review team and passed along to investigators. Whether data stored on a computer is evidence may depend on other information stored on the computer and the application of knowledge about how a computer behaves. Therefore, contextual information necessary to understand other evidence also falls within the scope of the warrant.

e. Further, in finding evidence of how a computer was used, the purpose of its use, who used it, and when, sometimes it is necessary to establish that a particular thing is not present on a storage medium. For example, the presence or absence of counter-forensic programs or anti-virus programs (and associated data) may be relevant to establishing the user's intent.

f. I know that when an individual uses a computer to obtain or access child pornography, the individual's computer will generally serve both as an instrumentality for committing the crime, and also as a storage medium for evidence of the crime. The computer is an instrumentality of the crime because it is used as a means of committing the criminal offense. The computer is also likely to be a storage medium for evidence of crime. From

my training and experience, I believe that a computer used to commit a crime of this type may contain: data that is evidence of how the computer was used; data that was sent or received; notes as to how the criminal conduct was achieved; records of Internet discussions about the crime; and other records that indicate the nature of the offense.

49. Based upon my training and experience and information relayed to me by agents and others involved in the forensic examination of computers, I know that computer data can be stored on a variety of systems and storage devices, including external and internal hard drives, flash drives, thumb drives, micro SD cards, macro SD cards, DVDs, gaming systems, SIM cards, cellular phones capable of storage, floppy disks, compact disks, magnetic tapes, memory cards, memory chips, and online or offsite storage servers maintained by corporations, including but not limited to “cloud” storage. I also know that during the search of the premises it is not always possible to search computer equipment and storage devices for data for a number of reasons, including the following:

a. Searching computer systems is a highly technical process that requires specific expertise and specialized equipment. There are so many types of computer hardware and software in use today that it is impossible to bring to the search website all of the technical manuals and specialized

equipment necessary to conduct a thorough search. In addition, it may also be necessary to consult with computer personnel who have specific expertise in the type of computer, software, or operating system that is being searched;

b. Searching computer systems requires the use of precise, scientific procedures which are designed to maintain the integrity of the evidence and to recover "hidden," erased, compressed, encrypted, or password-protected data. Computer hardware and storage devices may contain "booby traps" that destroy or alter data if certain procedures are not scrupulously followed. Since computer data is particularly vulnerable to inadvertent or intentional modification or destruction, a controlled environment, such as a law enforcement laboratory, is essential to conducting a complete and accurate analysis of the equipment and storage devices from which the data will be extracted;

c. The volume of data stored on many computer systems and storage devices will typically be so large that it will be highly impractical to search for data during the execution of the physical search of the premises; and

d. Computer users can attempt to conceal data within computer equipment and storage devices through a number of methods, including the

use of innocuous or misleading filenames and extensions. For example, files with the extension “.jpg” often are image files; however, a user can easily change the extension to “.txt” to conceal the image and make it appear that the file contains text. Computer users can also attempt to conceal data by using encryption, which means that a password or device, such as a “dongle” or “keycard,” is necessary to decrypt the data into readable form. In addition, computer users can conceal data within another seemingly unrelated and innocuous file in a process called “steganography.” For example, by using steganography a computer user can conceal text in an image file which cannot be viewed when the image file is opened. Therefore, a substantial amount of time is necessary to extract and sort through data that is concealed or encrypted to determine whether it is contraband, evidence, fruits, or instrumentalities of a crime.

50. Additionally, based upon my training and experience and information relayed to me by agents and others involved in the forensic examination of computers, I know that routers, modems, and network equipment used to connect computers to the Internet often provide valuable evidence of, and are instrumentalities of, a crime. This is equally true of wireless routers, which create localized networks that allow individuals to connect to the Internet wirelessly.

Though wireless networks may be secured (in that they require an individual to enter an alphanumeric key or password before gaining access to the network) or unsecured (in that an individual may access the wireless network without a key or password), wireless routers for both secured and unsecured wireless networks may yield significant evidence of, or serve as instrumentalities of, a crime—including, for example, serving as the instrument through which the perpetrator of the Internet-based crime connected to the Internet and, potentially, containing logging information regarding the time and date of a perpetrator's network activity as well as identifying information for the specific device(s) the perpetrator used to access the network. Moreover, I know that individuals who have set up either a secured or unsecured wireless network in their residence are often among the primary users of that wireless network.

51. Based on the foregoing, and consistent with Rule 41(e)(2)(B), the warrant I am applying for would permit seizing, imaging, or otherwise copying storage media that reasonably appear to contain some or all of the evidence described in the warrant, and would authorize a later review of the media or information consistent with the warrant. The later review may require techniques, including but not limited to computer-assisted scans of the entire medium, that might expose many

parts of a hard drive to human inspection in order to determine whether it is evidence described by the warrant.

BIOMETRIC ACCESS TO DEVICES

52. This warrant permits law enforcement to compel Christopher Coy Duffy to unlock any DEVICES requiring biometric access subject to seizure pursuant to this warrant. The grounds for this request are as follows:

a. I know from my training and experience, as well as from information found in publicly available materials published by device manufacturers, that many electronic devices, particularly newer mobile devices and laptops, offer their users the ability to unlock the device through biometric features in lieu of a numeric or alphanumeric passcode or password. These biometric features include fingerprint scanners, facial recognition features and iris recognition features. Some devices offer a combination of these biometric features, and the user of such devices can select which features they would like to utilize.

b. If a device is equipped with a fingerprint scanner, a user may enable the ability to unlock the device through his or her fingerprints. For example, Apple offers a feature called "Touch ID," which allows a user to register up to five fingerprints that can unlock a device. Once a fingerprint is

registered, a user can unlock the device by pressing the relevant finger to the device's Touch ID sensor, which is found in the round button (often referred to as the "home" button) located at the bottom center of the front of the device. The fingerprint sensors found on devices produced by other manufacturers have different names but operate similarly to Touch ID.

c. If a device is equipped with a facial-recognition feature, a user may enable the ability to unlock the device through his or her face. For example, this feature is available on certain Android devices and is called "Trusted Face." During the Trusted Face registration process, the user holds the device in front of his or her face. The device's front-facing camera then analyzes and records data based on the user's facial characteristics. The device can then be unlocked if the front-facing camera detects a face with characteristics that match those of the registered face. Facial recognition features found on devices produced by other manufacturers have different names but operate similarly to Trusted Face.

d. If a device is equipped with an iris-recognition feature, a user may enable the ability to unlock the device with his or her irises. For example, on certain Microsoft devices, this feature is called "Windows Hello." During the Windows Hello registration, a user registers his or her irises by holding

the device in front of his or her face. The device then directs an infrared light toward the user's face and activates an infrared-sensitive camera to record data based on patterns within the user's irises. The device can then be unlocked if the infrared-sensitive camera detects the registered irises. Iris-recognition features found on devices produced by other manufacturers have different names but operate similarly to Windows Hello.

e. In my training and experience, users of electronic devices often enable the aforementioned biometric features because they are considered to be a more convenient way to unlock a device than by entering a numeric or alphanumeric passcode or password. Moreover, in some instances, biometric features are considered to be a more secure way to protect a device's contents. This is particularly true when the users of a device are engaged in criminal activities and thus have a heightened concern about securing the contents of a device.

f. As discussed in this Affidavit, your Affiant has reason to believe that one or more digital devices will be found during the search. The passcode or password that would unlock the DEVICES subject to search under this warrant currently is not known to law enforcement. Thus, law enforcement personnel may not otherwise be able to access the data contained within the

DEVICES, making the use of biometric features necessary to the execution of the search authorized by this warrant.

g. I also know from my training and experience, as well as from information found in publicly available materials including those published by device manufacturers, that biometric features will not unlock a device in some circumstances even if such features are enabled. This can occur when a device has been restarted, inactive, or has not been unlocked for a certain period of time. For example, Apple devices cannot be unlocked using Touch ID when: (1) more than 48 hours has elapsed since the device was last unlocked; or, (2) when the device has not been unlocked using a fingerprint for 8 hours *and* the passcode or password has not been entered in the last 6 days. Similarly, certain Android devices cannot be unlocked with Trusted Face if the device has remained inactive for four hours. Biometric features from other brands carry similar restrictions. Thus, in the event law enforcement personnel encounter a locked device equipped with biometric features, the opportunity to unlock the device through a biometric feature may exist for only a short time.

h. Due to the foregoing, if law enforcement personnel encounter any DEVICES that are subject to seizure pursuant to this warrant and may be

unlocked using one of the aforementioned biometric features, this warrant permits law enforcement personnel to: (1) press or swipe the fingers (including thumbs) of Christopher Coy Duffy to the fingerprint scanner of the DEVICES found at the PREMISES; (2) hold the DEVICES found at the PREMISES in front of the face of Christopher Coy Duffy and activate the facial recognition feature; and/or (3) hold the DEVICES found at the PREMISES in front of the face of Christopher Coy Duffy and activate the iris recognition feature, for the purpose of attempting to unlock the DEVICES in order to search the contents as authorized by this warrant. The proposed warrant does not authorize law enforcement to compel that Christopher Coy Duffy state or otherwise provide the password or any other means that may be used to unlock or access the DEVICES. Moreover, the proposed warrant does not authorize law enforcement to compel Christopher Coy Duffy to identify the specific biometric characteristics (including the unique finger(s) or other physical features) that may be used to unlock or access the DEVICES.

53. Furthermore, law enforcement personnel will compel the use of Christopher Coy Duffy's biometric features only if (a) the procedure is carried out with dispatch and in the immediate vicinity of the premises to be searched, and if, at time of the compulsion, law enforcement personnel has (b) reasonable suspicion that

Christopher Coy Duffy has committed a criminal act that is the subject matter of the requested search warrant, and (c) reasonable suspicion that Christopher Coy Duffy's biometric features will unlock the respective device.

CONCLUSION

54. Based on the foregoing, there is probable cause to believe that the federal criminal statutes cited herein have been violated, and that the contraband, property, evidence, fruits and instrumentalities of these offenses, more fully described in Attachment B, are located at the locations described in Attachment A. I respectfully request that this Court issue a search warrant for the locations described in Attachment A, authorizing the seizure and search of the items described in Attachment B.

55. I am aware that the recovery of data by a computer forensic analyst takes significant time; much the way recovery of narcotics must later be forensically evaluated in a lab, digital evidence will also undergo a similar process. For this reason, the “return” inventory will contain a list of only the tangible items recovered from the premises. Unless otherwise ordered by the Court, the return will not include evidence later examined by a forensic analyst.

Lawrence P. Borghini
Special Agent
Federal Bureau of Investigation

Sworn and subscribed before me this 6th day of May, 2020.

Michael J. Frank
United States Magistrate Judge

ATTACHMENT A

DESCRIPTION OF LOCATIONS TO BE SEARCHED

The entire property located at 4068 Fairbanks Drive, Chipley, Florida 32428, including the residential building, travel trailer, outbuildings, and any appurtenances thereto (the SUBJECT PREMISES), and any person located at the SUBJECT PREMISES.

ATTACHMENT B

ITEMS TO BE SEIZED

The following materials, which constitute evidence of the commission of a criminal offense, contraband, the fruits of crime, or property designed or intended for use or which is or has been used as the means of committing a criminal offense, namely violations of 18 U.S.C. § 2252A(a)(2) and (a)(5):

1. Computers or storage media used as a means to commit the violations described above.
2. For any computer or storage medium whose seizure is otherwise authorized by this warrant, and any computer or storage medium that contains or in which are stored records or information that is otherwise called for by this warrant (hereinafter, "COMPUTER"):
 - a. evidence of who used, owned, or controlled the COMPUTER at the time the things described in this warrant were created, edited, or deleted, such as logs, registry entries, configuration files, saved user names and passwords, documents, browsing history, user profiles, email, email contacts, "chat," instant messaging logs, photographs, and correspondence;

- b. evidence of software that would allow others to control the COMPUTER, such as viruses, Trojan horses, and other forms of malicious software, as well as evidence of the presence or absence of security software designed to detect malicious software;
- c. evidence of the lack of such malicious software;
- d. evidence indicating how and when the computer was accessed or used to determine the chronological context of computer access, use, and events relating to the crime(s) under investigation and to the computer user;
- e. evidence indicating the computer user's knowledge and/or intent as it relates to the crime(s) under investigation;
- f. evidence of the attachment to the COMPUTER of other storage devices or similar containers for electronic evidence;
- g. evidence of programs (and associated data) that are designed to eliminate data from the COMPUTER;
- h. evidence of the times the COMPUTER was used;
- i. passwords, encryption keys, and other access devices that may be necessary to access the COMPUTER;

- j. documentation and manuals that may be necessary to access the COMPUTER or to conduct a forensic examination of the COMPUTER;
 - k. records of or information about Internet Protocol addresses used by the COMPUTER;
 - l. records of or information about the COMPUTER's Internet activity, including firewall logs, caches, browser history and cookies, "bookmarked" or "favorite" web pages, search terms that the user entered into any Internet search engine, and records of user-typed web addresses; and
 - m. contextual information necessary to understand the evidence described in this attachment.
3. Routers, modems, and network equipment used to connect computers to the Internet.
4. Child pornography, as defined in 18 U.S.C. § 2256(8), visual depictions of minors engaging in sexually explicit conduct, as defined in 18 U.S.C. § 2256(2), and child erotica.
5. Records, information, and items relating to violations of the statutes described above including:

- a. Records, information, and items relating to the occupancy or ownership of the SUBJECT PREMISES, 4068 Fairbanks Drive, Chipley, Florida 32428, including utility and telephone bills, mail envelopes, or addressed correspondence;
- b. Records, information, and items relating to the ownership or use of computer equipment found in the above residence, including sales receipts, bills for Internet access, and handwritten notes;
- c. Records and information relating to the identity or location of the persons suspected of violating the statutes described above;
- d. Records and information relating to sexual exploitation of children, including correspondence and communications between users of child pornography and exploitation websites.

As used above, the terms “records” and “information” includes all forms of creation or storage, including any form of computer or electronic storage (such as hard disks or other media that can store data); any handmade form (such as writing); any mechanical form (such as printing or typing); and any photographic form (such as microfilm, microfiche, prints, slides, negatives, videotapes, motion pictures, or photocopies).

The term “computer” includes all types of electronic, magnetic, optical, electrochemical, or other high speed data processing devices performing logical, arithmetic, or storage functions, including desktop computers, notebook computers, mobile phones, tablets, server computers, and network hardware.

The term “storage medium” includes any physical object upon which computer data can be recorded, including external and internal hard drives, flash drives, thumb drives, micro SD cards, macro SD cards, DVDs, gaming systems, SIM cards, cellular phones capable of storage, floppy disks, compact discs, magnetic tapes, memory cards, memory chips, and other magnetic or optical media.

During the execution of the search of the PREMISES described in Attachment A, law enforcement personnel are also specifically authorized to compel Christopher Coy Duffy to provide biometric features, including pressing fingers (including thumbs) against and/or putting a face before the sensor, or any other security feature requiring biometric recognition, of:

- (a) any of the DEVICES found at the PREMISES, and
- (b) where the DEVICES are limited to those which are capable of containing and reasonably could contain fruits, evidence, information, contraband, or instrumentalities of the offense(s) as described in the search warrant affidavit and warrant attachments,

for the purpose of attempting to unlock the DEVICES's security features in order to search the contents as authorized by this warrant.

This warrant does not authorize law enforcement personnel to compel any other individuals found at the PREMISES to provide biometric features, as described in the preceding paragraph, to access or otherwise unlock any DEVICE. Further, this warrant does not authorize law enforcement personnel to request that Christopher Coy Duffy state or otherwise provide the password or any other means that may be used to unlock or access the DEVICES, including by identifying the specific biometric characteristics (including the unique finger(s) or other physical features) that may be used to unlock or access the DEVICES. Furthermore, law enforcement personnel will compel the use of Christopher Coy Duffy's biometric features only if (a) the procedure is carried out with dispatch and in the immediate vicinity of the premises to be searched, and if, at time of the compulsion, law enforcement personnel has (b) reasonable suspicion that Christopher Coy Duffy has committed a criminal act that is the subject matter of the requested search warrant, and (c) reasonable suspicion that Christopher Coy Duffy's biometric features will unlock the respective device.

This warrant authorizes a review of electronic storage media and electronically stored information seized or copied pursuant to this warrant in order

to locate evidence, fruits, and instrumentalities described in this warrant. The review of this electronic data may be conducted by any government personnel assisting in the investigation, who may include, in addition to law enforcement officers and agents, attorneys for the government, attorney support staff, and technical experts. Pursuant to this warrant, the FBI may deliver a complete copy of the seized or copied electronic data to the custody and control of attorneys for the government and their support staff for their independent review.
